

Proposed Timber Sales on Holst State Forest 2007

Stand H-101 Measures 7.47 Acres. Candidate for harvest in 2008. Has mature and overmature Red oak, Basswood, Bitternut hickory, Ash. This stand has Oak wilt, Oak decline and is in a slow decline state. Shade tolerant hardwoods dominate the understory and regeneration aspects of this stand. Timing during a heavy mast crop year along with soil disturbance during the regeneration harvest is essential to get natural regeneration with supplemental planting if needed of walnut and white oak to sweeten up the mix during the reforestation phase.

Stand H-102. Measures 9.43 Acres. Upland Oak-Aspen stand needs Timber stand Improvement through Crop Tree Release.
